Summary

I'm a B.Tech graduate in Artificial Intelligence and Data Science who likes building things end to end, from React interfaces down to the databases and APIs behind them. I enjoy digging into problems, whether that means designing a new feature, tracing a bug to its root cause, or figuring out why a system is behaving the way it is. I'm looking for an opportunity to grow my skills.

Skills

Languages: Python, JavaScript, SQL

Frameworks & Libraries: ReactJS, FastAPI, SQLAlchemy, PyTorch, LangChain

Core Areas: Full Stack Web Development, RESTful API Design, WebSocket, Authentication & Authorization (basic), Application Debugging & Troubleshooting, Machine Learning

Tools & Platforms: Git, GitHub, Docker, Firebase, Neo4j, Postman

IT Fundamentals: Operating Systems (Windows, Linux basics), Networking Basics (TCP/IP, DNS)

Education

Kings Engineering College - Chennai

B.Tech. in Artificial Intelligence and Data Science

Sep 2022 - Apr 2026

CGPA: 8.3/10

Project Work

- **Real-Time Chat Application:**
 - Built a full-stack messaging application supporting one-to-one and group chats, voice/video calls, and 24-hour status stories, similar in scope to WhatsApp.
 - Implemented a single persistent WebSocket connection to handle typing indicators, online presence, read receipts, and WebRTC call signaling for voice and video calls.
 - Designed JWT-based authentication with refresh token rotation, role-based group membership, and granular per-user privacy controls.
- **KM Gurukulam – School Website (Live):**
 - Collaborated with a teammate to design and build a live website for a toddler school, currently deployed and used by the client for admissions.
 - Styled a fully responsive interface across the landing page, admissions form, and gallery sections, and handled the overall UI polish and layout.
 - Set up Firebase and Supabase as backend services to store admission submissions, and built an admin dashboard to search, filter, and export applicant data to Excel.
- **AI Avatar Assistant System:**
 - Built the full-stack architecture for an AI avatar assistant, connecting a React frontend to an async FastAPI backend through JWT-secured REST APIs.
 - Designed the authentication system with access/refresh tokens and session handling, and structured the PostgreSQL schema using SQLAlchemy's async ORM with Alembic migrations.
 - Built a background task scheduler for automatic media cleanup and orchestrated a multi-stage processing pipeline (speech-to-text, LLM response, text-to-speech, lip-sync) behind a single API layer.
- **StudyGraphRAG:**
 - Built a full-stack study assistant with a FastAPI backend and React frontend that lets users upload PDF documents and query them through a Neo4j knowledge graph.
 - Designed asynchronous background workers to parse documents, extract entities and relationships, and generate embeddings without blocking the main API.
 - Built REST APIs for document upload, graph management, and conversational querying, combining retrieved graph context with an LLM to generate answers.

Awards and Certificates

- **Vice President, AI Club (College):** Organized AI and machine learning seminars, mentored junior students, and conducted hands-on technical sessions.
- **Chatbot Challenge Runner-Up:** Secured 2nd place in a chatbot development competition at Sairam Institute by building a functional chatbot within 60 minutes.
- Completed Machine Learning and Data Science courses on Udemy covering supervised learning, deep learning, NLP, and basics of model deployment.
