Skills

Languages: Python, Javascript, SQL(PostgreSQL)

Libraries and Frameworks: Pandas, NumPy, Scikit-learn, PyTorch, Matplotlib, Seaborn, Plotly

Tools and Platforms: Excel, Power BI, Git, GitHub, Docker, Jupyter Notebook

Core Competencies: Exploratory Data Analysis, Feature Engineering, Predictive Modeling, Time Series Forecasting, Data Cleaning and Preprocessing, SQL Querying, Database Design, Dashboard Design, KPI Reporting

Education

Kings Engineering College - Chennai

B.Tech. in Artificial Intelligence and Data Science

Sep 2022 - Apr 2026

CGPA: 8.3/10

Project Work

- **Delivery Delay Prediction:**
 - Analyzed order and shipping data from an e-commerce platform to understand what leads to late deliveries, starting with cleaning the raw data and exploring delivery time patterns.
 - Engineered features such as freight-to-price ratio and the distance between customer and seller, then trained and compared XGBoost, LightGBM, CatBoost, and Random Forest models, tuning them with Optuna and logging every run in MLflow.
 - Used SHAP to explain which factors most influenced the predictions, and built a Streamlit app to test the model on new orders.
 - **Tech Stack:** Python, Pandas, Scikit-learn, XGBoost, LightGBM, CatBoost, Optuna, SHAP, MLflow, Streamlit
- **Retail Sales Analysis and Forecasting:**
 - Cleaned and organized a large retail transactions dataset, calculating fields such as shipping duration and profit margin along the way.
 - Converted the cleaned data into a time series format and built a sales forecasting model using Facebook Prophet to project future sales.
 - Turned the analysis into an interactive Power BI dashboard covering sales, profitability, and regional performance so it could be shared with stakeholders.
 - **Tech Stack:** Python, Pandas, NumPy, Prophet, Power BI
- **Power Generation Analysis:**
 - Combined seven months of official power generation data from India's Central Electricity Authority, covering over 500 power stations across the country, into a single Excel workbook.
 - Cleaned the raw data to remove duplicate summary rows, then calculated metrics such as target variance, target achievement percentage, and plant load factor for every station.
 - Built pivot tables and an executive dashboard with KPI cards and charts, which showed coal as the largest source of power and the national generation target being exceeded overall.
 - **Tech Stack:** Microsoft Excel, Pivot Tables
- **Social Media Comment Scraper:**
 - Built a tool to collect comments from Reddit and YouTube without needing API keys, adding rate limiting and retry logic so it could run reliably over long sessions.
 - Designed a PostgreSQL database to store scraped sessions, posts, and comments in a structured way, and wrote asynchronous code to insert data efficiently.
 - Added a text cleaning and language detection step, and built export options to JSONL, CSV, and Hugging Face dataset formats for further analysis.
 - **Tech Stack:** Python, PostgreSQL, AsyncPG, Langdetect

Awards and Certificates

- **Vice President, AI Club (College):** Organized AI and machine learning seminars, mentored junior students, and conducted hands-on technical sessions.
- **Chatbot Challenge Runner-Up:** Secured 2nd place in a chatbot development competition at Sairam Institute by building a functional chatbot within 60 minutes.
- Completed Machine Learning and Data Science courses on Udemy covering supervised learning, deep learning, NLP, and basics of model deployment.
