Skills

Languages: Python, SQL

Libraries and Frameworks: Pandas, Scikit-learn, XGBoost, Matplotlib, Seaborn, Plotly, PyTorch

Tools and Platforms: Excel, Power BI, Streamlit, Git, GitHub, Jupyter Notebook

Core Competencies: Exploratory Data Analysis, Feature Engineering, Predictive Modeling, Time Series Forecasting, Data Cleaning and Preprocessing, SQL Querying, Business Intelligence, Dashboard Design, KPI Reporting

Education

Kings Engineering College - Chennai

B.Tech. in Artificial Intelligence and Data Science

Sep 2022 - Apr 2026

CGPA: 8.3/10

Project Work

- **Sales Analysis and Forecasting:**
 - Cleaned and organized a large retail transactions dataset, calculating fields such as shipping duration and profit margin along the way.
 - Converted the cleaned data into a time series format and built a sales forecasting model using Facebook Prophet to project future sales.
 - Turned the analysis into an interactive Power BI dashboard covering sales, profitability, and regional performance so it could be shared with stakeholders.
 - **Tech Stack:** Python, Pandas, Prophet, Power BI
- **Retail Intelligence Dashboard:**
 - Analyzed 329,000+ retail transactions to trace why the business was running a \$1.6M net loss despite \$66.2M in gross sales, finding that discounts above 15% alone caused \$4.09M of it, while late deliveries stemmed from promised delivery windows running shorter than actual transit times.
 - Built a logistic regression model to flag risky orders early, forecasted future sales using Holt-Winters exponential smoothing, and simulated a 15% discount cap that would turn the loss into a \$6.4M profit gain, then wrapped it all into a Streamlit dashboard for stakeholders.
 - **Tech Stack:** Python, Pandas, Scikit-learn, Streamlit, Plotly
- **Business Performance & Profitability Analysis:**
 - Built a three-page Power BI report on multi-year retail data to track revenue, margins, and discount impact, writing DAX measures that showed discounts above 20% drove the most order volume but almost no profit, with nearly 47% of orders selling at a loss.
 - Broke revenue down by customer age and location, finding the 25-35 age group drove 64% of revenue, and mapped shipping times across major cities to confirm a steady 5-day fulfillment turnaround.
 - **Tech Stack:** Power BI, DAX
- **Power Generation Analysis:**
 - Combined seven months of official power generation data from India's Central Electricity Authority, covering over 500 power stations across the country, into a single Excel workbook.
 - Cleaned the raw data to remove duplicate summary rows, then calculated metrics such as target variance, target achievement percentage, and plant load factor for every station.
 - Built pivot tables and an executive dashboard with KPI cards and charts, which showed coal as the largest source of power and the national generation target being exceeded overall.
 - **Tech Stack:** Microsoft Excel, Pivot Tables

Awards and Certificates

- **Vice President, AI Club (College):** Organized AI and machine learning seminars, mentored junior students, and conducted hands-on technical sessions.
- **Chatbot Challenge Runner-Up:** Secured 2nd place in a chatbot development competition at Sairam Institute by building a functional chatbot within 60 minutes.
- Completed Machine Learning and Data Science courses on Udemy covering supervised learning, deep learning, NLP, and basics of model deployment.
